

Great O Plus

All-Natural Cattle Feed

GreatOPlus (GO+) Feed Nutrient is a performance feed ingredient designed to optimally deliver essential fatty acids and balance the Omega 6:3 ratio. Using proprietary technology, GO+ delivers enhanced animal performance, improved meat grades and superior levels of Omega-3s to consumer beef products when added to existing daily rations.

Essential fatty acids play a critical role in the health, growth efficiency, and quality of ruminant animals. GO+ delivers not just Omega-3, but long chain fatty acids EPA and DHA that are not produced efficiently in the animal, allowing increased conversion rate. Microalgae also is an additional source of poly-unsaturated fats.

GreatOPlus Feed Nutrient has undergone extensive research and feedlot testing. Inclusion of GO+ in daily rations and lick tubs provides multiple benefits, including:

- Reduced inflammation and need for antibiotics
- Improved ability to handle heat and feedlot stress
- Improved reproductive health, increased fertility, motility
- Improved autoimmune response
- Improved rumen bypass, conversion, and nutrient absorption
- Improved marbling in the meat cuts
- Improved hoof health
- Improved daily weight gain
- Relief from bovine high-mountain disease (*low oxygen saturation*), pinkeye, and other conditions
- Beta Glucans bind toxins and stimulate the immune system.
- Highly digestible protein and energy source

Feed Applications for Every Part of the Animal Lifecycle

Cow-Calf

- Improved reproductive efficiency
- Improved body scores of cows before/after birth
- Increased calf growth weights
- Improved calf morbidity and mortality rates

Weaning

- Improved growth weights
- Improved feed conversion
- Improved health for upcoming stress events

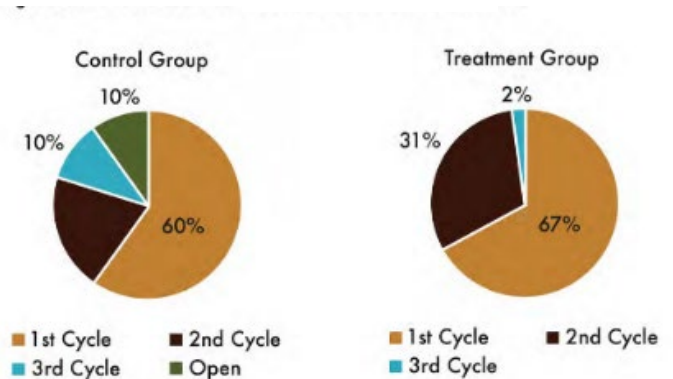

Stockers & Backgrounders

- Improved growth weights
- Improved feed conversion
- Improved health for upcoming stress events

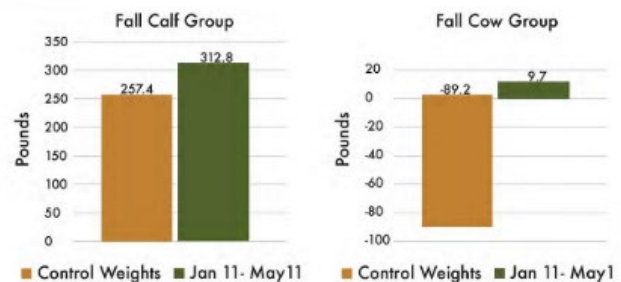

Feed yard

- Improved health
- Improved morbidity and mortality rates
- Improved feed conversion
